

PROJECT SCOPE STATEMENT	
Project Name	RateMyApartments
Project Deliverables	Detailed Description
Documents	The documents that would be provided for this project are the business case, activity list, activity-based schedule, change request, communication management plan, cost estimates, detailed budget, final project report, issue log, lessons learned report, meeting agenda, meeting minutes, milestone-based schedule, project charter, project documentation guidelines, project HR requirements, project requirements, project roles and responsibilities, project scope statement, project status report, quality assurance plan, quality management plan, RACI chart, request for proposal, risk register, stakeholder engagement plan,, stakeholder register, statement of work.
The web application	Due to the fact that this project is dedicated to Regina, we would have to design the website in the simplest way possible to allow for ease of use. This would give the users a very enjoyable and smooth experience with the website. We would also have to give room for extension of the code later in future if we are looking to expand to more cities. But for now, in order to get a recognition for the app and so on, it would make more sense to minimize the tools and features to allow for ease of use and to market better. We are of the opinion that it is better to market something that the community needs and that is easy to use than to market something we think everyone is doing. This would mean including only the extremely necessary features for now and then extend later in the future. Features including, allowing users to check out the reviews and allowing users to also upload their own reviews about apartments in Regina.
Project Exclusions	
Overcrowding of tools and features, tools and features that are not key to the main issue the platform would be addressing.
